

**What is it?**

## **What is ShareIt?**

ShareIt is a web-based application that provides a flexible communication system. It can be set up as a one-to-one and/or one-to-many and/or many-to-many set of communication channels. Who sees what is under the control of a system administrator who invites participants into one or more private and/or public communication channels (groups). Within those communication channels top-level users and participants post topics, responses and comments along with associated files. Topics, responses and comments are all organised within categories. Groups of users see only the categories associated with the groups they belong to.

## **Example Application areas**

- Accountant and clients

An accountant subscribes to the SaaS ShareIt application and invites his/her clients into separate private communication channels. The accountant (top-level user) posts topics that could be requests for data (tax returns, company information, payment details etc.) or information (new legislation, ways of reducing liabilities etc.) and any other communication. The client (participant) posts responses to the topics which might be requested textual data, a note with an attached file, a request for clarification. The accountant can set up an extra channel into which he/she invites all clients for the dissemination of common data. The system provides a repository for data and an audit trail for all communications and activities.

This architecture of service provider/client exists in many other lines of business. Some examples are:

- Doctor/patients
- HR department/employees
- Publisher/authors
- Teacher/students
- Solicitor/clients
- MP/constituents
- Business/customers
- Taxi service/passengers

- Training

Another important application area for ShareIt is training. The flexibility of the application lends itself to configuration for a wide range of data types, including training materials. The wording in the interface can be changed so that, where by default we have “categories” we can rename it to “courses”. Topics become “course modules” and carry the course notes and other documentation, but, more importantly, videos. So, in one place all course module materials are available to the trainee.

Now, the responses provide a communication channel to the trainer and other trainees for questions, requests for clarification or other discussion topics. Comments on the responses provide a channel for answers. Therefore, the responses/comments provide a forum for the course participants to ask questions, find answers and generally get involved in the training process. Each course module has its own forum for focused discussion. Of course, the wording can be changed in the interface to call “responses/comments” “questions/answers”, or any other wording appropriate for the course.

Moreover, each group sees a different set of courses, so, in one interface, the system can handle all the different training requirements for the organisation. Users can belong to more than one group, so group membership becomes the mechanism for allocating courses to trainees.

## **Communication Channels**

- A top-level user can set up any number of communication channels.  
(Note: communication channels take the place of stakeholder types in the original model).
- Top-level users invite one or more participants into a communication channel.
- A participant can be in one or more communication channels.
- A communication channel can be private (one participant) or public (many participants).
- Top-level users can share a private communication channel with other top-level users.
- Initially a communication channel is private but more participants can be added to make it public.

## **Posting Topics**

- Top-level users and optionally (set in preferences) participants post topics (synonyms: items, issues, themes, subjects, threads) into their communication channels.
- Topics in public communication channels are seen by all participants in that communication channel.
- Topics in private communication channels are seen only by the one participant and any top-level user seeing that communication channel.
- Topics are identified in the interface as being private or public, depending on which communication channel they reside in.

## **Responses**

- Responses (synonym: replies) to topics are posted by participants and top-level users.
- Responses to private topics are only seen by the participant and top-level user(s) who can view that communication channel.
- Responses to public topics are seen by all participants and top-level user(s) who can view that communication channel.

## **Comments**

- Comments (synonyms: observations, notes, remarks) are public or private along the same lines as responses.

## **File Attachments**

- Each topic, response and comment can have one or more files attached.

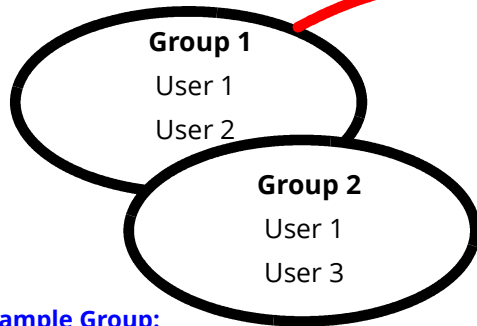

## **Options**

There are options available to top-level users and, separately, participants:

- top-level options:
  - whether a participant can post topics;
  - alert options - every event, hourly report, daily digest, never;
  - more TBD...
- participants:
  - alert options on posts - every event, hourly report, daily digest, never etc.;
  - more TBD...

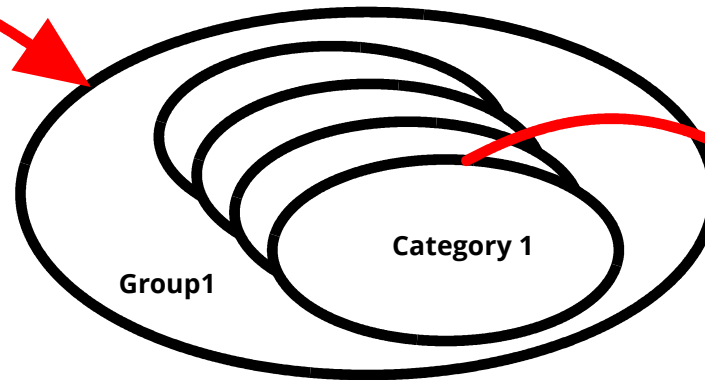

# How Communication Channels Work

**Users** belong to **Groups**  
a user can belong to more than one group

**Example Group:**  
Facilities

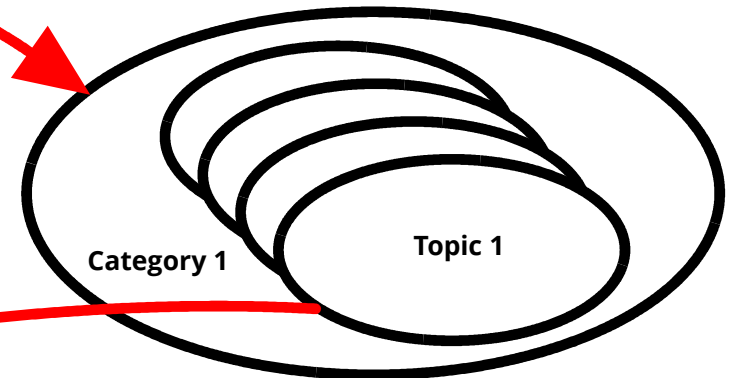

Each Group contains **Categories**  
Categories help organise **Topics**

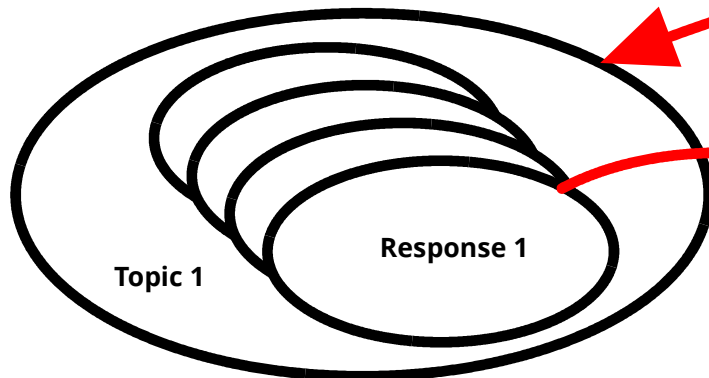

**Example Category under Facilities:**  
Maintenance

**Example Topic under Maintenance:**  
Car park potholes. Is there any plan to repair the car park?

Each Category contains **Topics**  
Users add **Responses** to Topics

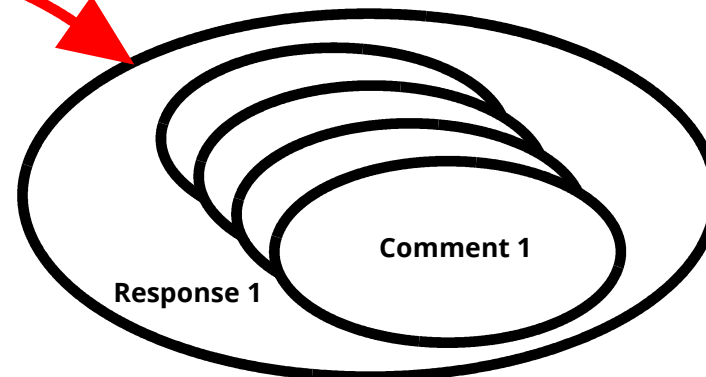

Each Topic contains **Responses**  
Users can add **Comments** to Responses

**Example Comments under Maintenance planned...:**  
Will there be any alternative parking spaces?  
Only off-site parking in public car park opposite.

Each Response contains **Comments**

**Example Response under Car park potholes...:**

Maintenance planned for 28-05-2019.  
Car park will have limited access until  
03-06-2019. Apologies for any inconvenience.

**How does it work?**

The  
**ShareIt**  
Engagement Platform

allows you, as a stakeholder, to communicate directly with us either on topics we have created or ones you have added.

Login or register to get your voice heard.  
We really want to hear from you.

Login

Email

Password

Click [HERE](#) if you have forgotten your password.

**Access to the system is protected by  
user name and password. Only 'strong'  
Passwords are allowed.**

A red arrow points from the text above to the email input field.

Groups **ShareIt Users** ▼

Each group has a set of Categories. Users can add new categories and edit ones they have created.

Categories **Development** ▼

Aliquam tempor erat a ligula ultrices rutrum sed vitae leo. Vivamus

Users are arranged into Groups. Once logged in, users see a list of the groups they belong to, and can select the group they want to interact with. Groups are managed by a System Administrator.

Each category has a set of Topics. Users can add new topics and edit ones they have created.

A user logged in as a System Administrator will see a System Admin button which gives access to the Administration area.
